EDUCATION

California Polytechnic University, San Luis Obispo

San Luis Obispo, CA

B.S. in Computer Science

Expected Graduation: May 2029

GPA: 3.82 (Dean's List)

Relevant Coursework: Software Engineering, Systems Programming, Data Structures, Fundamentals of Computer Science, Linear Analysis, Computer Organization

PROJECTS

LLM Evaluation Pipeline

- Built event-driven LLM benchmarking pipeline using AWS Lambda, Amazon MQ, and Python asyncio to evaluate three models
- Designed a search and caching layer with Elasticsearch and Redis, enabled real-time aggregates and targeted cache invalidation
- Built RLHF-style annotation UI in Next.js, persisting human ratings to Redis and Elasticsearch for model benchmarking

Mustang Market

- Launched a marketplace platform for Cal Poly students, growing to 900+ users in three months
- Built an image pipeline with Firebase SDK that converts HEIC/HEIF to jpg, compresses, and uploads to Cloud Storage
- Integrated Groq AI to screen listing titles and descriptions on creation, blocking unwelcome content before listings go live

VORA (Voice Operated Response Agent) - Kiro Hacks

- Built a Chrome extension that controls the browser hands-free, made for users with motor impairments
- Engineered an LLM intent pipeline sending DOM snapshot and Web Speech API transcript to Claude, executing browser actions
- Designed hands-free wake-word activation that adapts to unreliable speech-to-text by detecting phonetic similarities

ENVISION Wardrobe

- Built an outfit engine (React Native, Expo) scoring color harmony, pattern, clothing-fit, and weather, for 90+ Testflight users
- Integrated Groq Vision API to detect clothing type, colors, patterns, brands, and upload it to your wardrobe from a single photo
- Self-hosted background removal on Google Cloud Run using rembg and Docker, eliminating API costs

WORK EXPERIENCE

Spread Goodness

Remote, Santa Barbara CA

Software Engineering Intern

May 2026 – Present

- Built regression test suites for critical user flows using Docker containers and the Firebase emulator
- Designed and implemented seed data generation to simulate realistic user states, enabling consistent, repeatable test runs
- Wrote test scripts with Playwright, integrating with GitHub Actions to run automated regression checks

Math Tutor

Hybrid, Clayton, CA

Self-Employed

Nov 2023 – Apr 2024

- Helped students improve grades through structured one-on-one sessions in Algebra 1 and Algebra 2.
- Tracked students' grades on a graph to give them a visual representation of their growth
- Adapted teaching approach to individual learning styles, delivering sessions both remotely and in-person

SKILLS

Programming Languages: Python, JavaScript, TypeScript, Java, C#

Frameworks & Libraries: React, React Native, Next.js, Node.js, Tailwind CSS, Expo, FastAPI

Tools & Platforms: Git, Google Cloud Run, Neon, Prisma, Unity, Docker, AWS Lambda, Amazon MQ, Elasticsearch, Redis
